Data Recovery Studio is a software that allows you to recover data that was lost or damaged due to a hard drive crash or a virus attack. It includes numerous tools to help you find your lost files. You can use these tools to fix disk partitions and folders, recover file sizes, and find lost data. Data Recovery Studio scans the drive surface for corrupted sectors and bad clusters. It then discovers the filenames of all files that have been changed. To recover the contents of deleted, lost, or formatted partitions or folders, Data Recovery Studio uses two different approaches: previewing and scanning. Previewing can provide you with a list of all the files in your partition or folder and their size, as well as the type of file. You can preview the files with a few mouse clicks. The Preview feature is available for FAT, FAT32, NTFS, exFAT, and HFS+ partitions. Scanning is used to recover files when they're gone forever. Data Recovery Studio scans your hard drive in one of three ways: in place, safe mode, or Quick mode. To recover lost data, you can choose to save it to disk, send it to a server, or send it to your email. The scan result will include a preview of the files found, a progress bar, and a report of the filenames, size, and date of creation. Furthermore, Data Recovery Studio provides you with disk repair tools, such as a file recovery wizard, disk repair, partition repair, partition recovery, and basic disk partition recovery tools.
